Developing New Zealand's 'Future Proof' Safety Culture

Brett Murray, CEO Site Safe

Developing New Zealand's 'Future Proof' Safety Culture

Not a tick-box exercise

Care > Compliance

**Talks to workers and
involves workers**

State of the Industry

A safe industry is an attractive industry

More women in the construction sector

High turnover of workers & transient worker

Maori & Pasifika over-represented in stats

Low skill level, easy access at labouring levels

Multiple companies operating onsite together

Construction Health and Safety in the News

Site Safe Goals for 2021

Review foundational H&S requirements with industry

Mental Health Course in partnership with St John

Lower rate of injury for industry

A digital solution for managing H&S effectively

What is the Client's Role in Health & Safety?

If you create the risk, you need to manage the risk

Due Diligence

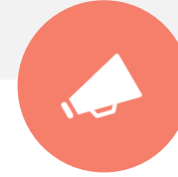

Ask right questions

Stay involved

H&S Tools and resources

Advocacy

Some Questions to Ponder

? What steps do you take as a client or a client's representative to gain assurance against the safety performance of main contractors?

? Do you have a clear understanding of minimum H&S Standards?

? What minimum H&S expectations do you set?

? Are these leading to better or worse outcomes?

? How do you monitor H&S performance of the contractors and the site in general?

? How do you audit contractor performance on site throughout the course of the project?

? How do you measure the H&S performance of your contractors?
