CANTERBURY REBUILD SAFETY FORUM

As the main construction contractors involved with the Christchurch rebuild together with the two Government agencies responsible for health and safety,

- We are committed to actively supporting the goals of the recently launched 'Construction Sector Action Plan'

REBUILDING A BETTER FUTURE

CANTERBURY REBUILD SAFETY FORUM

- The success of this industry based collective approach to safety has been confirmed through independent research conducted by the NZ Institute of Economic Research (NZIER)
- The consistent reduction in the number of ACC injury claims each over the past six years also demonstrates the success of this approach. We believe that a similar approach in other parts of the industry will produce similar results

CANTERBURY REBUILD SAFETY FORUM

- To achieve this, and to meet requirements of the Health and Safety Employment Act 1992 and the Department of Labour's Principal's Guide to Contracting, our companies use the following health and safety protocols

CANTERBURY REBUILD SAFETY FORUM

- Pre qualification of all contractors
- Use of contractors who have been accredited to meet the industry health and safety standard
- Require 'Site Specific Safety Plans' for all work (these plans are the benchmark safety planning tool used in commercial construction across New Zealand)

CANTERBURY REBUILD SAFETY FORUM

- Require a task analysis for all work that is deemed significantly hazardous
- Training and competency registers required for all contractors and their staff
- Monitoring of site safety practices using internal and/or external processes

CANTERBURY REBUILD SAFETY FORUM

- Group Hazard Alerts sent out to Industry
 - Accidents, Incidents and Near Miss
 - Public Safety
- These are sent to Southern Liaison Group, Main Contractors, Sub Contractors, Clients and Industry Associations
